## Foreword

Below is a list, with prices, of the plants that we have in stock at this time. Everything offered consists of strong, vigorous plants, PREPARED (*to the best of our ability*), for the *needs and conditions* of the places for which they are recommended in the descriptions herewith. Some of the descriptions refer to plants which cannot be supplied in the "Prepared" grade, as the roots may not be properly developed, or the tops may not be of sufficient thickness or symmetry. In that case *they are not priced below*, but can be supplied on special quotation, for those who can give them good treatment and wait for the landscape effects. Sometimes we are sold out of the "Prepared" plants, and in that case we will write you and mention whether a different grade can be supplied. It is to the advantage of both the customer and ourselves to have orders placed in advance of planting season, so that the plants may be reserved. If satisfactory references are given, payment after delivery can be arranged.

## EVERGREENS.

In comparing the prices of growers, we urge that buyers of Evergreens investigate as to quality also. The specimens offered here all have compact symmetrical tops of the best type for the variety, and have been transplanted, in the nursery, at least once in the past two years. Each carries with it an excellent ball of earth on the roots, which makes it heavy to move, but helps greatly to insure success to the planter.

## HEDGE PLANTS.

Please Note:—The dimensions of Hedge Plants are given by both height, and the spacing recommended for single-line planting under most conditions. To compute the number of plants needed for any particular hedge, find out the length of the proposed hedge in inches, then divide by the spacing of the plant to be used. The result will be the number of plants needed. Thus, if a hedge is desired of Barberry, to be eighteen inches high when planted, and fifty feet long, then one would need forty of the 18-inch Barberry, if spaced 15 inches.

Fairfax Farms Nursery,  
Fairfax, Va.

Gentlemen:

The arbor vitae arrived in good condition, and I have planted them in a nice row, forming a hedge in front of an unsightly bank in back of my house. My family and my neighbors are enjoying the sight, and personally I am also very much pleased with the trees you sent me, and the excellent care you gave them in balling the ground around the roots. If you are ever out this way I hope you will take a glance at them.

I notice in your catalogue you mention the pistillate and staminate hollies. May I ask how certain you are that they will come true, starting with the young trees from the nursery? I am a great admirer of holly trees, and may want to plant a couple next spring.

Thanking you for your prompt and efficient service, I remain,

Very sincerely yours,

W. W. COBLENTZ.

This nursery is located at Sideburn Station on the main line of the Southern Railroad sixteen miles west of Alexandria and four miles south of Fairfax, or Fairfax Court House, as it is often called. It may be reached from Washington over the new Lee Highway, or from Alexandria over the Little River Pike, in either case turning south at Fairfax Court House. Inspection of our stock is invited.
